How to make good telephone service even better...
You'll save time if you look up numbers before you call
Have you ever had the feeling that you're not quite sure of a familiar telephone number you're about to call? Even the number of a friend you call quite often? Your memory tells you it's 3108. Or is it 3189? The best way to settle it is to look up numbers before you call. You'll save time—and avoid the delay and embarrassment of having a stranger answer if your memory tricks you into getting an incorrect number.

Faster Long Distance service
is yours, when you give the operator the out-of-town telephone number you want rather than just the name and address of the party you are calling. You'll not only save your time... but calling by number means better service for everyone, especially now when telephone lines are carrying so many urgent industrial and military calls.

Steel Executive Addresses Local Management Club

A period of tremendous industrial expansion still lies ahead for the west coast region, according to Charles L. Hamman, general sales staff manager of the Columbia Steel Company, who was the featured speaker at a recent meeting of the Palos Verdes County Club, Hamman based his prediction upon the production performance of the steel industry during the past ten years. The total tonnage of steel consumed in the coastal region in 1941, according to the speaker, was approximately 2 and one-half million tons, 27 per cent of which was manufactured in the west coast. The amount produced in the coastal area last year was slightly in excess of 5 million tons with 61 per cent of this total manufactured in the coastal area.
